Week 2 Quiz

Latest Submission Grade 87.5%

1. What is the name of the TensorFlow library containing common data that you can use to train and test neural networks? **1 / 1 point**

- ○ TensorFlow Data
- ○ TensorFlow Data Libraries
- ○ There is no library of common data sets, you have to use your own
- ◉ TensorFlow Datasets

Correct
Correct!

2. How many reviews are there in the IMDB dataset and how are they split? **1 / 1 point**

- ○ 50,000 records, 80/20 train/test split
- ◉ 50,000 records, 50/50 train/test split
- ○ 60,000 records, 80/20 train/test split
- ○ 60,000 records, 50/50 train/test split

Correct
That's right!

3. How are the labels for the IMDB dataset encoded? **1 / 1 point**

- ○ Reviews encoded as a number 1-10
- ◉ Reviews encoded as a number 0-1
- ○ Reviews encoded as a boolean true/false
- ○ Reviews encoded as a number 1-5

Correct
Correct!

4. What is the purpose of the embedding dimension? **1 / 1 point**

- ◉ It is the number of dimensions for the vector representing the word encoding
- ○ It is the number of dimensions required to encode every word in the corpus
- ○ It is the number of letters in the word, denoting the size of the encoding
- ○ It is the number of words to encode in the embedding

Correct
That's right!

5. When tokenizing a corpus, what does the num_words=n parameter do? **1 / 1 point**

- ○ It specifies the maximum number of words to be tokenized, and picks the first 'n' words that were tokenized
- ○ It errors out if there are more than n distinct words in the corpus
- ○ It specifies the maximum number of words to be tokenized, and stops tokenizing when it reaches n
- ◉ It specifies the maximum number of words to be tokenized, and picks the most common 'n-1' words

Correct
Correct!

6. To use word embeddings in TensorFlow, in a sequential layer, what is the name of the class? **0 / 1 point**

- ○ tf.keras.layers.Word2Vector
- ○ tf.keras.layers.Embed
- ○ tf.keras.layers.Embedding
- ◉ tf.keras.layers.WordEmbedding

Incorrect
Not quite.

7. IMDB Reviews are either positive or negative. What type of loss function should be used in this scenario? **1 / 1 point**

- ○ Binary Gradient descent
- ◉ Binary crossentropy
- ○ Categorical crossentropy
- ○ Adam

Correct
Correct!

8. When using IMDB Sub Words dataset, our results in classification were poor. Why? **1 / 1 point**

- ○ Our neural network didn't have enough layers
- ○ We didn't train long enough
- ○ The sub words make no sense, so can't be classified
- ◉ Sequence becomes much more important when dealing with subwords, but we're ignoring word positions

Correct
That's right!
